**DETAILED ACTION**

***Election/Restrictions***

1. Claims 42-129 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected waveguide and method of making a waveguide, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 7/28/09.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zhao et al (6,538,087 or WO 02/10231; citations are for the US Patent).

Zhao et al disclose a polymeric composition for forming waveguides including a norbornene polymer/oligomer, crosslinking agent, a catalyst system having a pro-catalyst and co-catalyst which fall within the scope of the instant claim limitations, antioxidant, photoinitotor, and a polymerizable/ cross-linking monomer (column 5, lines 25-55, column 7, column 17, columns 21 and 22, columns 49 and 50). Norborene-type compound suitable for use in either or both on the polymerizable monomer or polymer/oligomer include hexyl and/or benzyl-norbornenes, alkyl substituted phenyl norbornenes (phenethyl, C34), diphenylmethyl silane norbornenes, bisnorbornenmethoxydimethyl or diphenylmethyl silanes(C39, lines 25-65) (formulas VIII), as well as others (column 34, column 47, lines 38-53).

It would have been obvious to one of ordinary skill in the art to employ a polymer and crosslinkable/polymerizable monomer each having one of these compounds, and a co-polymer or ter-polymer would have a different refractive index than a single monomer (column 5, 2-4; and teachings where compounds of VII, VIIa, and VIIb may be employed in the polymer with a monomer).
